PROFESSIONAL SUMMARY

Performance-driven **Flutter Developer** with 1.5+ years of experience specializing in cross-platform mobile development and production-ready architectures. Proven track record of building scalable mobile applications using **Riverpod, RESTful APIs**, offline-first caching, and hardware integrations. Expert at translating complex designs into high-performance code while maintaining **clean architecture** and strict version control.

EDUCATION

Bachelor of Science in Computer Science, BRAC University
Relevant Coursework: Data Structures & Algorithms, Database Systems, Web Development, Software Engineering

PROFESSIONAL EXPERIENCE

Software Engineer — Catch Bangladesh Ltd April 2026 – Present

- **Architected** a scalable, offline-first codebase architecture utilizing **Riverpod** and `sqflite` local caching; designed a reusable REST API service layer featuring automated token management, secure session tracking, and robust error handling.
- **Engineered** an enterprise field-ready Asset Management System, integrating hardware-level **QR and UHF RFID scanning** modules alongside queued synchronization workflows for seamless offline inspection tracking.
- **Standardized** company-wide mobile UX design systems by developing a unified library of responsive widgets, while implementing advanced accessibility features including **Text-to-Speech (TTS) pipelines** and high-contrast UI layouts for legacy and localized applications.

Software Engineer — Vista Systech September 2024 – August 2025

- **Refactored** and shipped the production-grade **Rinzin Beauty Flutter application**, migrating a legacy booking template into a live salon and retail platform with multi-gateway payments and push notifications.
- **Engineered** custom business logic using **MobX stores** to handle dynamic computed pricing structures, state persistence, and secure REST API authentication pipelines.
- **Developed** reusable UI component libraries and a modular service layer for the **Beauty Line Bangladesh React application**, implementing custom hooks for optimized data fetching and pagination.

Junior Developer — ANA-Soft June 2024 - August 2024

- Collaborated on **database query optimization** to reduce latency and ensured system stability during peak traffic periods.
- Refined backend logic and UI components for the UGC Equivalence portal to improve user retention and accessibility.

TECHNICAL SKILLS

Mobile Development	Flutter, Dart, Riverpod, Offline-first (sqflite), QR/UHF RFID Integration
Backend & Database	REST APIs, Firebase (Firestore, Auth), SQL
Web & Tools	Git, Figma UI Translation
Other Skills	Next.js, React.js

KEY PROJECTS

Next Cart (ERP & POS Solution)

- Developed a **multi-platform ERP & POS system** (Android, Web, Windows) managing 10+ business modules including Inventory, Finance, and Vendor Management.
- Engineered a **hardware-integrated POS module** with support for RH10S barcode scanners via keyboard wedge emulation and thermal printing for localized PDF receipts.
- Architected a scalable **state management layer using Provider** and a secure persistence system using **Flutter Secure Storage** for sensitive business data.
- Streamlined inventory workflows with **bulk CSV data processing**, real-time stock tracking, and **Firebase Cloud Messaging** for business-critical notifications.

Gram Adalat (PlayStore)

- **Optimized and maintained** a legacy educational mobile application designed to democratize legal literacy regarding the Bangladesh Village Court Act for rural communities.
- Engineered **advanced accessibility features**, including **Text-to-Speech (TTS) pipelines** for visually impaired users alongside **high-contrast UI layouts** optimized for color-blind readability.

Hikma (PlayStore)

- Built responsive **Flutter UI** with reusable widgets, **shimmer skeletons**, and a custom green-backdrop layout system.
- Standardized UX through a **shared component library** and **Figma-derived theme** (colors, typography, navigation).
- Designed a reusable **API service layer** with **model parsing, token management**, and robust network/error handling.
- Delivered immersive reader features including **text-to-speech, chapter progress tracking, and dynamic text–image layout**.

Personal Life Analytics (Github)

- Built a modular **Flutter data hub** integrating **Health Connect, Cashew CSV, location exports**, and Google Calendar into unified monthly summaries.
- Developed reusable widgets and a **feature-based architecture (Riverpod)** to standardize data modules and **accelerate source onboarding**.
- Implemented an **AI analysis pipeline** with **multi-provider API support (OpenAI/Gemini)**, structured insight parsing, and **local caching**.
